Would this look OK with y-axis 0 -100 in steps of 10?

Trying to size total figure for letter page across 2 columns—taller vertical should be fine and increasing font size for axis text.

Repeated measures ANOVA significance in panel A? Or would it be too busy and just describe in results?

In panel B, post hoc tests given main effect of sex, likely significant diff for KF94, KN95, and surgical (line w/ stars corresponding to sig level)?
